RE: Type 1A Modification to Solid Waste Management Facility Permit
Bestway Disposal Services
43 Industrial Drive
Belmont, NH

To Whom It May Concern

On behalf of Blow Bros. dba Bestway Disposal Services (BDS), GeoInsight, Inc. (GeoInsight), prepared a Type 1A Solid Waste Management Facility Permit Modification through New Hampshire Department of Environmental Services (NHDES). The Permit is for the Bestway Disposal Construction & Demolition Debris Processing and Single Stream Recycling Transfer Facility (the Facility) located at the above address. The Facility and the proposed permit modifications are described below.

The current solid waste permit held by BDS permits an allowable capacity of 153 tons per day (TPD) of solid waste, which includes 138 TPD of construction and demolition debris, and 15 TPD of recyclables, and 655 cubic yards (CY) of storage. The modification of the permit includes allowing an additional daily average of 350 TPD of capacity (up to a total of 503 tons), with a not-to-exceed peak of 600 tons on any single day. The increased capacity will be used to manage additional recyclables, construction and demolition debris, and also new municipal solid waste (MSW).

Approval of the new capacity is requested to begin in January 2015 to address the waste stream management needs of the towns opting out of the current solid waste Cooperative. The size and layout of the Facility is currently sufficient to handle the increased traffic and materials and, therefore, no changes to the Facility structures or features are proposed. BDS is in the process of finalizing a contract with the Town of Belmont to provide the additional service (BDS already manages C&D and recyclables for Belmont and other members of the Coop).
