

## Laboratories Providing Testing Services

### Recommended by NH Department of Environmental Services for Private Well Users and Home Buyers

NHDES recommends that private well users and people buying a home with a private well test their well water for the parameters listed in Table 1. NHDES recommends testing, because it is common for private wells to have harmful levels of contaminants. For additional information, see the NHDES flier "[What's in Your Water?](#)"

When you receive test results from a laboratory, visit NHDES' [Be Well Informed website](#). It will interpret your test results and help you understand your water treatment options.

| Table 1<br>NHDES Recommendations for Private Well Testing  |   |
|--|---|
| Private Well Users   | "NH Well Water Test for Home Buyers"                              |
| <b>Test every 3 to 5 years<br/>(except for bacteria and nitrate,<br/>which are recommended yearly)</b>   | <b>Test during the inspection period as specified in contract</b> |
| Arsenic<br>Bacteria (Total Coliform and <i>E. coli</i> )<br>Chloride<br>Copper*<br>Fluoride<br>Hardness<br>Iron<br>Lead*<br>Manganese<br>Nitrate/Nitrite<br>pH<br>Radon**<br>Sodium<br>Uranium |   |
| <b>Other chemicals depending on circumstances***</b>   |   |

\*For current well users, NHDES recommends testing for stagnant lead and copper in addition to flushed lead and copper.

\*\*Radon may be omitted for wells that do not reach into bedrock (for example, dug wells).

\*\*\*Circumstances to be considered include nearby land uses, proximity of the well to a septic system leach field, the possibility of fuel or other chemical spills nearby, and the availability of resources to pay for testing. For more information, see NHDES' Fact Sheet [DWGB-2-1 Suggested Water Quality Testing for Private Wells](#).

In order to be included in the list below (Table 2), a laboratory **must** provide a test package that includes the 15 parameters in the “NH Well Water Test for Home Buyers.” Contact a laboratory to confirm its capability of providing all desired tests and test pricing. It is not necessary to do all of these tests at one time.
