Drinking Water State Revolving Loan Fund Disadvantaged System Program

This fact sheet identifies the criteria and describes the procedure used in the Drinking Water State Revolving Loan Fund (DWSRF) program regarding the Disadvantaged System Assistance Program.

Definition

A disadvantaged community or system is defined as a community public water system or community that serves residents whose median household income (MHI) is less than the statewide MHI based upon the most recent census data and/or salary survey.

If an applicant for DWSRF assistance meets the definition of “disadvantaged,” and if the resulting project user rate (which is the total of the existing rate in addition to the rate that results from the new project) exceeds the statewide affordability criteria, they may be eligible for subsidies from the Disadvantaged System Assistance Program.

Limitations to Disadvantaged Program Assistance

All other subsidies obtained from other institutions that will reduce the project cost are considered when calculating a project’s affordability. The subsidy an applicant receives from the DWSRF Disadvantaged System Community Program will reflect the contribution from other sources of assistance resulting in an amount of subsidy that does not exceed the amount that the system would be eligible for under this program alone.

Loans for land acquisition and source protection activities for disadvantaged communities or systems can only be accomplished with loan money from the source water protection (SWP) account at the standard rate for project loans. No principal forgiveness will be given for source water protection activities.

Affordability Criteria and Terms of Financial Assistance

Affordability of a proposed project considers both the resulting user rate (based on usage of 275 gallons per household per day) and the median household income of the community system or community in which the system exists. An affordable project is one that results in user rates that do not exceed one percent of the system or town MHI. For the purpose of determining the level of subsidy given the applicant through the Disadvantaged Community System Program, the following process is followed.

Communities or systems deemed “disadvantaged” will be given, when available, a subsidy in the form of principal forgiveness to bring the resulting user rate closer to being “affordable.” The level of subsidy will be determined by using an Affordability Index which serves to measure the impact of a project on a disadvantaged community. The index is calculated by dividing the resulting project user rate by one percent of the community’s or community system’s MHI. Loan rates and terms for this program will be

the same as those for standard project loans.

Identification of Systems to Receive Assistance

Projects are prioritized using the system described in the Intended Use Plan for each fiscal year and identified on the project list as eligible for assistance from the Disadvantaged Community System Program.

For Additional Information

Please contact the Drinking Water and Groundwater Bureau at (603) 271-2513 or dwgbinfo@des.nh.gov or visit our website at <http://des.nh.gov/organization/divisions/water/dwgb/index.htm>. All of the bureau's fact sheets are online at <http://des.nh.gov/organization/commissioner/pip/factsheets/dwgb/index.htm>.
