

Master Plan Planning

Master Plan Work Order should be planned as much in advance as possible. All information entered on the Planning Tab will be transferred to any subsequent PM Work Order. Refer to the section on Work Order Planning of this document for more details on the planning requirements for PM work orders.

Scheduling

When scheduling PM work orders consideration should be given to the frequencies recommended by the original equipment manufacturer. However, the PM frequencies should be determined and adjusted as required in response to actual operating and maintenance experiences.

IMPLEMENTATION OF THE CONTINGENCY PLAN

Oil Spill Reporting

State of New Hampshire Regulations (Env-Or 604.06) require that the responsible party or other person who becomes aware on an oil discharge (such as Wheelabrator, if a customer truck releases oil) shall notify NHDES immediately after obtaining knowledge that a discharge meeting one or more of the criteria listed has occurred. Any spill that meets one or more of the criteria listed below must be reported to NHDES.

1. A discharge of any oil into surface water (i.e., Burnham Brook) or groundwater of the state;
2. A discharge of 25 gallons or more of oil to land;
3. A discharge of less than 25 gallons to land, unless the discharge is cleaned up immediately and properly disposed of;
4. A discharge of oil that results in the presence of vapors that pose an imminent threat to human health (such as gasoline spilled where vapors enter a building);
5. A discharge of oil resulting in a violation of the groundwater quality criteria in a sample collected in a water supply well; or
6. A discharge of oil resulting in the detection of Non Aqueous Phase Liquid (NAPL)(includes a layer of oil floating on water surface or more dense liquids accumulating at the bottom of a pond or waterway for example).

Hazardous Material Spill Reporting Regulations

The State of New Hampshire Hazardous Waste regulations (Env-Hw 513.01) require reporting within 1 hour upon discovery of any discharge of hazardous waste or any discharge of a material which when discharged becomes a hazardous waste that poses a threat to human health or the environment, for example, into storm or sanitary sewers, onto the land or into the air, groundwater or surface waters. Wheelabrator Concord does not routinely have any materials on site that when spilled would be reportable since the materials, when waste are not listed hazardous waste. When non-routine materials are brought on site, the regulatory list in Env-Hw 402 is reviewed to determine if the material would be reportable to the NHDES if spilled.

The definition of Hazardous waste in NH includes Env-Hw 404.02 Spills Residues and Contaminated Soil, Water and Debris. Any residue or contaminated soil, water or other debris resulting from the spill or cleanup of a spill into or on any land or water of any hazardous waste or any material listed in Env-Hw 402 shall be regulated as a hazardous waste mixture in accordance with Env-Hw 404.01.

Hazardous Waste Contingency Plan Required Reporting

In addition to the reporting requirements of 40 CFR Part 265 Subpart D / Env – Hw 509.02 the Emergency Coordinator must immediately (within 1 hour) notify the NHDES using the 24-hour spill response number or the National Response Center (1-800-424-8802) immediately (within 15 minutes), and provide the following information:

- Name, address and telephone number of the reporter,
- Name and address of the facility,
- Date, time and type of incident (e.g. fire, explosion);
- Name and quantity of material(s) involved, to the extent known;
- The extent of injuries, if any; and
