Also, on page 33, under Hazardous Material Spill Reporting Regulations, first paragraph, there is a reference to Env-Wm. Please update this rule reference to the current Env-Hw standard.

Hi Matt,

On page 26 of the Operations Manual, Scheduling section, it states the "PM work orders are as follows:", but doesn't include any work orders. Please explain.

Paul

**Subject:** Wheelabrator Concord-Revised Solid Waste Operating Manual-Rev 3

Paul:

Per our conversation on 10/31/14, attached is a revised Facility Operating Manual that is part of the pending permit application for the ash building scrubber, lime grit pumping and maintenance enclosure projects. The manual has been revised as follows:

- Correct the Solid Waste Permit number listed on page 4, and in the document footer.
- Add additional information related to residual waste management to Section 4.
- Add additional information related to facility routine maintenance, inspection and monitoring requirements necessary to assure the integrity of facility operation to Section 5

- Add a description of the radioactive load procedure to Section 6. Attached example form on Page 36.

A hardcopy of the manual is also being sent to your attention.

If you have any questions or comments, please let me know.

Thanks.
