

STATE OF NEW HAMPSHIRE
DEPARTMENT OF ENVIRONMENTAL SERVICES

RECOVERY.GOV

Supplemental Intended Use Plan
Capitalization Grant Under the
American Recovery and Reinvestment
Act of 2009

**State of New Hampshire CWSRF
Supplemental Intended Use Plan
Capitalization Grant Under the
American Recovery and Reinvestment Act of 2009**

I. Introduction

This Intended Use Plan (IUP) accompanies the State of New Hampshire's application for a \$39,163,900 capitalization grant for the Clean Water State Revolving Fund (CWSRF) program under the American Recovery and Reinvestment Act (ARRA) of 2009. It is considered a supplement to the IUP for 2009 that was previously approved by EPA.

II. CWSRF Program Goals

The State of New Hampshire is committed to using the capitalization grant for which it is applying to provide assistance to wastewater, nonpoint source and estuary projects which will proceed quickly to construction, thereby creating jobs and furthering the water quality objectives of the Clean Water Act. The State of New Hampshire's goal is to enter into binding commitments for projects that will proceed to construction or award of construction contracts by February 17, 2010.

The State of New Hampshire recognizes that the goal of the ARRA is to expeditiously fund eligible projects that simultaneously create jobs, promote economic recovery, and generate long-term benefits from infrastructure investment. In this grant, the State is being called upon to accomplish goals that may not have previously been priorities in its base SRF program. Some priorities and activities in the State's base program that may not practically be attainable within the timeframes associated with the ARRA will be pursued using funds made available through the base CWSRF program.

III. Sources and Uses of Funds

The State of New Hampshire is applying for a capitalization grant in the amount of \$39,163,900. This represents the amount that the State is eligible to receive under the State's allocation from the supplemental appropriation enacted under the ARRA. The entire ARRA Capitalization Grant will be used as ARRA Project subsidization providing 50 percent of the funds allotted for each project that is awarded funding (see Table 1). The remaining 50 percent of the funds for a project will be awarded from the base CWSRF program (see Table 2).

New Hampshire reserves the right to use a portion of the 4% administration set-aside of the CWSRF ARRA funding to cover costs incurred prior to submittal of the IUP.

Table 1 summarizes the sources and uses of the ARRA capitalization grant for which the State is applying:

**Table 1
Sources and Uses of ARRA Capitalization Grant**

SOURCES		AMOUNT
Capitalization Grant		\$ 39,163,900
	TOTAL SOURCES	\$ 39,163,900
USES		
Energy/Water Efficiency, Non-point Source, Estuary-Green Infrastructure Projects		\$ 7,832,780
Wastewater Projects		29,764,564
Total ARRA Project Assistance Subsidization		37,597,344
Administration (4 percent)		1,566,556
	TOTAL USES	\$ 39,163,900

The State of New Hampshire intends to transfer \$8,435,000 from the base CWSRF program to the base DWSRF program. The State does not intend to transfer funds between the ARRA CWSRF and DWSRF capitalization grants.

Table 2 summarizes the sources and uses of the base SRF capitalization grants with remaining balances:

**Table 2
Sources and Uses of Base Capitalization Grants**

SOURCES		AMOUNT
FFY 2005 Capitalization Grant + State Match		\$ 3,020,025
FFY 2006 Capitalization Grant + State Match		10,137,820
FFY 2007 Capitalization Grant + State Match		12,407,084
FFY 2008 Capitalization Grant + State Match		7,852,040
FFY 2009 Capitalization Grant + State Match		7,852,040
Repayment Account		62,420,020
	TOTAL SOURCES	\$103,689,029
USES		
ARRA Project Assistance		\$37,597,344
SRF Project Assistance		57,656,685
Transfer of Funds to DWSRF		8,435,000
	TOTAL USES	\$103,689,029

Table 3 outlines the anticipated grant payments into the ACH by quarter.

**Table 3
Grant Payments**

Quarter	Incremental A.C.H. payment
2008-3	0
2008-4	0
2009-1	0
2009-2	\$ 6,769,000 FFY 2008 grant
2009-3	\$39,163,900 ARRA grant
	\$ 6,769,000 FFY 2009 grant
2009-4	0

IV. Criteria and Methods for Distribution of Funds

A. Project List

The State conducted a comprehensive outreach campaign to alert potential borrowers of federal plans to provide economic recovery stimulus funding. Public informational meetings were held on January 8 and February 6, 2009. Notices were sent to the CWSRF mailing list, emails were distributed to municipal officials, and a New Hampshire Department of Environmental Services (NHDES) web site was established to publish news, guidance and fillable SRF loan pre-application forms. Information was updated as details of the stimulus legislation changed and became finalized on February 17, 2009. The state has focused on reaching out to communities with projects ready to award construction contracts and those that may be eligible for principal forgiveness subsidy assistance. As a result of this effort, the CWSRF program identified over \$630 million in eligible projects that could be ready to proceed to construction within the time deadlines established by the ARRA. The projects were divided into three categories: energy efficiency/water conservation - green infrastructure, non-point source – green infrastructure and wastewater/stormwater. The energy efficiency/water conservation project list includes projects having a minimum of 50 percent of the cost related to water conservation or energy efficiency activities. The green infrastructure list includes projects addressing non-point source pollution and estuary restoration. The wastewater/stormwater list includes wastewater treatment projects that may have a water conservation or energy efficiency component amounting to less than 50% of total project cost.

B. Additional Subsidization

The ARRA requires that not less than 50% of the appropriated funds provide assistance in the form of additional subsidization. The State of New Hampshire adopted interim rules, Chapter Env-Wq 500, which establishes authority to provide financial assistance in the form of grants, principal forgiveness and loans as authorized by a specific capitalization grant. The rules became effective on March 1, 2009.

Tables 1 and 2 above demonstrate that at least 50% of the available funding for projects will be provided via principal forgiveness. Any subsequent revision to this project list will likewise demonstrate that at least 50% of the available funding for projects will be provided via principal forgiveness.

C. Green Infrastructure

The ARRA requires that, to the extent there are sufficient eligible project applications, not less than 20% of the appropriated funds be used for water conservation, energy efficiency, green infrastructure, or other environmentally innovative activities. A minimum of 10% of funds provided through the capitalization grant will be allocated to projects on the Energy Efficiency - Green Infrastructure Project list and/or the Non-point Source/Estuary – Green Infrastructure Project list. The remaining 10% will be allocated to the green portions of projects on the Wastewater Project list. Table 1, above, shows that 20% of the total assistance in the amount of \$7,519,469 is for projects or portions of projects meeting one or more of the specific objectives required by this provision.

There are sufficient projects on the State of New Hampshire's project lists that contain qualifying green infrastructure components to allocate at least 20 percent of the ARRA funds for this purpose.

D. Preference for Expeditious Activities

The ARRA requires priority be given to projects that will be ready to award construction contracts and proceed to actual construction within 12 months of the date of enactment. In anticipation of compliance with this requirement, the State of New Hampshire is consulting with all potential assistance recipients with projects on the project priority lists and making a determination as to which of these projects can be started and completed expeditiously. The CWSRF pre-application form submitted for each project by each applicant requesting ARRA assistance included the anticipated date for construction contract award. After receiving a capitalization grant, the State will provide ARRA assistance to projects that qualify for this preference.

In addition, ARRA section 1602 requires that "recipients shall give preference to activities that can be started and completed expeditiously, including a goal of using at least 50 percent of the funds for activities that can be initiated not later than 120 days after enactment" of the Act. The State of New Hampshire intends to implement this preference requirement by selecting for first ARRA funding those projects that appear most likely to be able to start construction by June 17, 2009.

E. Avoidance of Reallotment/Relationship to Base Program

In order to meet the requirements and deadlines of the ARRA for the expeditious and timely commitment and expenditure of funds, the State of New Hampshire will regularly review the data reported to EPA on the progress of assistance recipients under the statutory deadlines specified in this IUP to identify any issues with the timeliness of this progress. If such issues are identified, the State of New Hampshire intends to work with EPA to resolve such issues. The State will include conditions in its assistance agreements to ensure that assistant recipients make timely progress with respect to

entering into construction contracts and/or commence construction. If an assistance recipient fails to maintain progress with these conditions, the recipient will either be offered funding from base CWSRF monies or will be repositioned on the project priority list so that ARRA funding can be provided for a project that is ready to proceed to construction.

The State understands that the U.S. Environmental Protection Agency may de-obligate grant funds from States that fail to meet requirements on timely use of ARRA funds. However, if the State is eligible for additional funds made available by a reallocation of ARRA funds, the State will provide EPA with a list of projects from its project priority list that are immediately prepared to proceed to construction.

F. CWSRF Prioritization Process

The SRF program will assist communities with eligible projects starting from the highest ranked project to the lowest ranked project based on the number of points received in accordance with the ranking criteria for each of the three lists until all of the funds are committed. The ranking criteria for each of the three lists: Energy efficiency/water conservation - green infrastructure, Non-point source – green infrastructure and Wastewater/stormwater are described below. Point allocations for each list are located in Appendix A. The final ranked lists are located in Appendix B.

Energy Efficiency/Water Conservation List

Description of Criteria

I. Readiness to Award Construction Contract

Readiness to award construction contract means the expected date when the project construction contract will be awarded.

II. Project Includes Component that has Water Efficiency or Energy Benefit

Prorated percentage of project cost means that portion of project costs related to green infrastructure, water conservation, energy efficiency or environmentally innovative components. This criterion is for projects having 50% or more of project costs related to these components. Projects with 49% or less project costs relating to these components are subject to separate ranking criteria. 81-100% means that water efficiency or energy efficiency components of a project comprise 81-100% of project costs. 65-79% means that water efficiency or energy efficiency components of a project comprise 65-79% of project costs. 50-64% means that that water efficiency or energy efficiency components of a project comprise 50-64% of project costs.

III. Affordability

Affordability means the ratio calculated as the community sewer use fee divided by the community median household income times 100%. The sewer use fee is the latest such data compiled by the New Hampshire Department of Environmental Services. The median household income is the median

household income of the town, city or political subdivision as compiled by the year 2000 United States Census.

Non-Point Source – Green Infrastructure List

Description of Criteria

I. Readiness to Award Construction Contract

Means the date when the project construction contract will be awarded.

II. Project Benefits to Environment or Public Health

- The project improves stormwater management in an area that is within one mile of a stormwater-impaired water body.
- The project implements a requirement in the municipality's NPDES MS4 permit, or the stormwater management plan incorporated in the permit.
- The project addresses a chronic flooding problem.
- The project improves water quality in unimpaired water bodies.

III. Green Infrastructure/Environmentally Innovative Projects

Green Infrastructure includes a wide array of practices at multiple scales that manage wet weather to maintain and restore natural hydrology by infiltrating, evapotranspiring and capturing and using stormwater. On a regional scale, green infrastructure is the preservation and restoration of natural landscape features, such as forests, floodplains, and wetlands, coupled with policies such as infill and redevelopment that reduce overall imperviousness in a watershed. On the local scale green infrastructure consists of site- and neighborhood-specific practices, such as bioretention, green roofs, porous pavements and cisterns. Projects must result in a construction contract award or start of construction before February 17, 2010. Planning and design activities that are reasonably expected to result in capital projects that have a construction contract award or start of construction before February 17, 2010 are also eligible.

Wastewater/Stormwater List

Description of Criteria

I. Readiness to Award Construction Contract

Readiness to award construction contract means the expected date when the project construction contract will be awarded.

II. Project Benefits to Environment or Public Health

State or federal order means the public owner is under a court order or a state or federal consent decree or a state or federal administrative order or administrative order by consent requiring the owner to address pollution control issues by complying with a schedule of events.

Surface water quality impairment issue(s) means the project will result in the removal of pollutants that cause surface water impairment(s).

Chronic NPDES Compliance Issues (w/out order) means the project will result in the elimination of frequent violations of a facility's NPDES permit discharge limitations but the facility discharge does not cause a surface water impairment and is not currently subject to a state or federal enforcement action.

Surface water quality in unimpaired waters means that the project will result in an improvement of surface water quality in a segment that is not impaired.

Little water quality benefit means that the project will result in negligible or no improvement in surface water quality.

III. Project Benefits Treatment Plant, Pump Station or Sewer System Facility Capacity

Facility flow or loading as a percent of capacity means the current wastewater treatment plant, pump station or sewer (collectively a facility) hydraulic or organic loading divided by its design hydraulic or organic loading times 100%. Above 100% means the facility is currently operating in excess of its design capacity. 81-100% means a facility is currently operating at between 81 and 100% of its design capacity. 70-80% means a facility is currently operating at between 70 and 80% of its design capacity. <70% means a facility is currently operating at less than 70% of its design capacity.

IV. Project Includes Component that has Green Infrastructure, Water Efficiency, Energy Efficiency or Environmentally Innovative Benefit

Prorated percentage of project cost means that portion of project costs related to green infrastructure, water conservation, energy efficiency or environmentally innovative components. This criterion is for projects having up to 49% of project costs related to these components. Projects with 50% or more project costs relating to these components are subject to separate ranking criteria. 35-49% means that green infrastructure, water conservation, energy efficiency or environmentally innovative components of a project comprise 35-49% of project costs. 20-34% means green infrastructure, water conservation, energy efficiency or environmentally innovative components of a project comprise 20-34% of project costs. 1-19% means that green infrastructure, water conservation, energy efficiency or environmentally innovative components of a project comprise 1-19% of project costs. Less than 1% means that green infrastructure, water conservation, energy efficiency or environmentally innovative components of a project comprise less than 1% of project costs.

V. Affordability

Affordability means the ratio calculated as the community sewer use fee divided by the community median household income times 100%. The sewer use fee is the latest such data compiled by the New Hampshire Department of

Environmental Services. The median household income is the median household income of the town, city or political subdivision as compiled by the year 2000 United States Census.

When two or more projects receive the same project criteria score, the project with the greater existing population served will receive the higher ranking.

In the event that any of the projects initially identified for funding under the ARRA are unable to proceed, these delayed projects will be bypassed and the funds will be re-allocated to projects with lower ranking based on the ranking criteria.

In the event that final project costs are higher than that provided on the pre-application for the project, funding for the difference in project cost will come from base SRF Capitalization grants without principal forgiveness.

The attached project lists (Appendix B) include projects that were assessed through the CWSRF prioritization process.

G. Loan Terms and Fees

An SRF loan (binding commitment) will be required for the total eligible cost of the project. Loan funds will be disbursed throughout the duration of the project by means of disbursement requests submitted to the NHDES by the community.

Upon completion of the project, a Supplemental Loan Agreement (SLA) will establish the final terms of the loan and include an amortization schedule for loan repayment. The amortization schedule will also establish the amount of forgiveness (50% of each principal repayment). One hundred percent of the ARRA capitalization grant will be used for "additional subsidization" in the form of forgiveness of principal. The forgiveness will be applied at the time of each loan repayment.

Interest charges during loan repayment will be fixed over the loan repayment period. Interest charges will be based on the established market rate. Loan interest charges during repayment shall be 0 percent of the established market rate when a 5 year repayment period is selected, 50% of the established market rate minus 2% when a 10 year repayment period is selected, 75% of the established market rate minus 2% when a 15 year repayment period is selected, 80% of the established market rate minus 2% when a 20 year repayment period is selected and 85% of the established market rate minus 2% when a 30 year repayment period (if available) is selected. The market rate used to establish the current interest rates is the 11 G.O. Bond Index published the first week of April. The interest rates will be re-evaluated based on the market rate for the first week in October 2009. Repayments shall not exceed the maximum repayment period allowed by the Water Quality Act or the capitalization grant.

In addition to the interest charges established above, an annual administrative fee in the amount of 25 percent of the established market rate shall be charged on all outstanding loans during the loan repayment period when a 5 year repayment period is selected.

In addition to the interest charges established above, an annual administrative fee in the amount of 2% on the unpaid principal balance shall be charged on all outstanding loans during the loan repayment period when a 10, 15 or 20 year repayment period is selected.

No interest or administrative fees will be charged on the principal forgiveness portion of the loan.

V. Public Review and Comment

In compliance with the requirement of CWA sec. 606(c) to provide for public review and comment, the State of New Hampshire posted the Intended Use Plan in draft form at www.dep.state.recovery.gov beginning on March 27, 2009. The State also provided notice of the availability of this IUP to the public by an announcement on that date in a newspaper with state-wide circulation and all organizations and individuals on its distribution list by email. A public hearing was held on April 3, 2009, and public comments were received until April 10, 2009 at 4 pm. All of the comments that were received were reviewed and a written response was provided to each comment. Several changes were made to the draft lists based re-allocation of points as a result of the comments received.

VI. Assurances

The Department is committed to enter all projects funded by ARRA into the CW SRF Benefits Reporting System.

The Department agrees to comply with the Federal program requirements as outlined in the Operating Agreement between EPA and the State of New Hampshire dated March 1989.

APPENDIX A

**Ranking Criteria
Point Allocations**

**AMERICAN RECOVERY AND REINVESTMENT ACT OF 2009
CWSRF PROJECT PRIORITY LIST
STORMWATER/NON-POINT SOURCE PROJECTS
RANKING CRITERIA (MAXIMUM = 100 POINTS)**

I. Readiness to Proceed to Award Construction Contract (Maximum 30 points)

<u>Construction Contract Award Date</u>	<u>Maximum</u>	<u>Points</u>
By June 17, 2009	100%	30.0
June 18-August 16, 2009	75%	22.5
August 17-October 15, 2009	50%	15.0
October 16-December 14, 2009	25%	7.5
December 15, 2009-January 16, 2010	10%	3.0
After January 16, 2010	0%	0

II. Project Benefits to Environment or Public Health (Maximum 30 points)

<u>Project Addresses:</u>	<u>% Maximum</u>	<u>Points</u>
Stormwater Impaired Water	100%	30.0
NPDES MS4 Compliance issue	75%	22.5
Chronic Flooding	50%	15.0
Surface water quality in unimpaired waters	25%	7.5
Little water quality benefit	0%	0.0

III. Green Infrastructure/Environmental Innovation (40 points)

Low Impact Development (manages stormwater to maintain and restore natural hydrology by infiltrating, evapotranspiring and capturing and using stormwater) 40

- OR -

Establishment and restoration of riparian buffers 20

Restoration of stream morphology (e.g. adequate culvert sizing) 20
